

Sprint 1 Retrospective - 9/25/2025

Members: Charlie, Pradeep, Aurora, Wang

Date: 9/25/2025

Agenda

- Review progress made from last sprint, talk about what worked, what didn't
- What did we like best from last sprint?
- What did we dislike from last sprint?
- What should we change moving forward?
- What should stay the same moving forward?
- Any thoughts & suggestions to improve our next sprint and ensure its successful moving forward to the end of the project

Details

- A lot of general dissatisfaction around communication and doing things last minute
 - In the future should make a more conscious effort to plan ahead and communicate things ahead of time (please)
- The group should try to collaborate and speak more in person
 - Feels hard to talk to each other sometimes and we spend a lot of time sitting in silence, should try to decrease this
- Do better with writing test cases and better commit messages
 - Right now many features have been implemented with little to no test cases and it is clear TDD is not being followed, try to be better about it going forward
 - In the same vein, need to write acceptance and validation criteria for user stories as a group so we have those as documentation going forward.
- Try to do the necessary documentation as we go, it's really annoying to have to remind everyone about the required documentation

- Everyone needs to look at the project deliverables ahead of time so we are each individually aware of what needs to be turned in and when the deadlines are
 - Felt like in this sprint a lot of reminding had to be done and it was not as self-organized as it could have been
- Despite these problems, the work that we managed to complete was rather impressive, especially with a completely new tech stack
 - Good job to everyone for completing the sprint objective and delivering the required increment

Decisions

- Meet more often outside of class just to work on the project
- Communicate better, try to be more active on slack
- Do things ahead of time, when making big changes make sure to let everyone know beforehand
